RéSUMé
L'objectif de l'étude sur la pauvreté urbaine et la résilience à Antananarivo est d'identifier les actions politiques efficaces pour améliorer la qualité de vie et accroître la résilience des pauvres à Antananarivo et d'informer le gouvernement national et les autorités municipales sur la manière de mieux cibler et financer les programmes de réduction de la pauvreté.

L'enquête espère atteindre ces objectifs à travers :

i. la collecte de données pour permettre une analyse de la pauvreté et de la vulnérabilité afin de mieux comprendre la répartition spatiale de la pauvreté à Antananarivo ;

ii. la collecte des données permettant d'analyser la disponibilité des infrastructures, l'accès aux services de base, ainsi que l'incidence des risques naturels ; et

iii. la collecte de données permettant d'analyser la capacité des pauvres à se protéger contre les risques et à faire face aux catastrophes.

L'enquête à Antananarivo a été mise en œuvre par Oxford Policy Management (OPM). Sa mission consistait à établir des listes de 200 zones de dénombrement (ZD = EA) et de conduire et traiter les données de 2 400 entretiens dans les ménages à Antananarivo, à l'aide de la technologie CAPI (Computer Assisted Personal Interview). Le projet a débuté en août 2016 et s'est terminé en janvier 2017.

The objective of the Antananarivo Urban Poverty and Resilience Study is to identify policy actions that have a high potential to improve the quality of life and increase the resilience of the poor in Antananarivo and to inform the national government and municipal authorities on how to better target and finance poverty reduction programmes.

The survey will hope to meet these objectives by:

i. Collecting data to allow for poverty and vulnerability analysis in order to better understand the spatial distribution of poverty in Antananarivo;

ii. Collecting data to allow for the analysis of the availability of infrastructure, access to basic services, as well as the incidence of natural hazards; and

iii. Collecting data to allow for the analysis of the ability of the poor to protect against risk and cope with disasters.

Echantillonnage

Méthode d'échantillonnage

Un processus de sélection aléatoire à plusieurs étapes a été utilisé pour sélectionner les ménages enquêtés dans le cadre de l'étude sur la Pauvreté et résilience à Antanananarivo.
Les étapes d'échantillonnage suivantes ont été complétées :
(1) Sélection des EA ; (2) Sélection des habitations ; (3) Sélection des ménages ; (4) Sélection du répondant aléatoire.
Ces calculs sont nécessaires pour pouvoir calculer le poids d'un échantillon de ménage. En raison de la nature complexe de l'échantillonnage à plusieurs degrés qui a été utilisé pour cette étude, les poids d'échantillonnage sont nécessaires pour corriger la possibilité que des unités d'étude individuelles, cest-à-dire des ménages, soient sélectionnés avec des probabilités d'échantillonnage différentes.

Pour plus de détails sur la conception et la mise en œuvre de l'échantillon, voir la section 4 du rapport d'étude d'Antananarivo sur la pauvreté urbaine et la résilience.

A multi-stage random selection process was used to select households for interview for the Antananarivo Urban Poverty and Resilience Study. The following sampling stages were completed: (1) Selection of EAs; (2) Selection of dwellings; (3) Selection of Households; (4) Selection of Random Respondent. These calculations are necessary to be able to calculate a household sample weight. Due to the complex multi-stage nature of sampling that was used for this study, sample weights are required to correct for the potential that individual study units, i.e. households are selected with unequal sampling probabilities.

For further details on sample design and implementation, see Section 4 of Antananarivo Urban Poverty and Resilience Study report.

Notes sur la collecte des données

Travail sur le terrain
La planification et la préparation du travail sur le terrain ont commencé en août 2016 et se sont poursuivies jusqu'au début de la formation des enquêteurs en octobre 2016. Au cours de la période de préparation, une attention particulière a été accordée à la contextualisation et à la traduction des instruments du questionnaire, au recrutement de travailleurs de terrain expérimentés et à la facilitation de l'accès aux communautés de l'échantillon. La phase de préparation comprenait un exercice de pré-test de cinq jours au cours duquel les instruments et les protocoles ont été testés.

Formation à l'instrument de l'enquête et à la procédure

La formation s'est déroulée du 11 au 22 octobre et a été dirigée par Andres Arau (OPM), avec le soutien de Andrianina Rakotoarimanana (consultants ATW), Juan Munoz et Rawaa Harati (Banque Mondiale).

Au total, 50 enquêteurs, 6 superviseurs et 2 membres du personnel de suivi ont commencé la formation et les superviseurs et les enquêteurs ont été sélectionnés sur la base de l'expérience et des aptitudes démontrées pendant la formation.

Le questionnaire a été affiné au cours de la formation sur la base des réactions des enquêteurs, des modifications de dernière minute apportées par l'équipe de la Banque mondiale et des problèmes rencontrés pendant le projet pilote.

L'équipe finale recrutée après la formation était composée de 30 intervieweurs et de 6 superviseurs.

La langue d'enseignement pendant la formation a été le français avec une formation d'accompagnement en malgache, en particulier dans les cas où les concepts étaient difficiles à comprendre en français. Toutefois, les instruments de l'ICPA présentaient à la fois le français et le malgache, ainsi que l'original en anglais. Cela a permis de clarifier les concepts et d'affiner les traductions pendant la formation et le pilotage. Si des problèmes ont été constatés avec la traduction malgache ou française des instruments, la traduction a été améliorée par consensus dans la classe. De plus, des incohérences dans le questionnaire ou les instruments de l'ICPA ont été signalées et corrigées au cours de la formation et du projet pilote sur une base continue.
